

REV	DESCRIPTION	DATE
0	Dashboard interface plan	2026-10-05

ZONE LIST

NO	ZONE	CONTENT	DATA / ACTION
1	Sidebar	Logo, shipment cards with live status, view links	One card per shipment
2	Top bar	Breadcrumb, simulation pill, export	CSV of the incident log
3	Hero and notice	Promise, and what is real versus simulated	Always visible
4	Shipment header	Title, cargo, vehicle, status chip	tripStatus()
5	KPIs	Arrival, device mode, last contact, speed or relays	platformView()
6	Live map	Corridor, plan, track, alerts, fleet relays	Leaflet + OpenStreetMap
7	Alerts feed	What the platform received, and what is still stored on the device	Severity, channel, delay
8	Replay	Scrub or play the whole trip	Filters what is known at time t
9	Links, modes, ETA	Link and mode strips, plan versus live ETA, last gasp	eta.js, model.js

DETAIL A: ALERT CARD (3:1)

Unauthorized stop00:28:00

Stopped 10 min outside every authorized zone

HIGH

FLEET RELAY . RL-PEER-07

DELIVERED 9 min LATER

- a severity dot
- b title and time of the event on the device
- c detail
- d severity, channel, delay before delivery

USER FLOW

- Pick a shipment (1), read its status chip and KPIs (4, 5).
- Follow the alerts (7); each shows the channel it travelled and how late it arrived.
- Click an alert to centre the map on it (6).
- Replay (8) to see only what the platform knew at that moment.
- Check the arrival estimate or the last gasp (9). Export the log (2).

GENERAL NOTES

- Zones and labels taken from web/src/main.js; widths and grids from web/src/style.css.
- CSS breakpoints: 1250 px, 930 px, 620 px (panels stack, sidebar hides on mobile).
- Demo data in web/src/demo-trips.json: real route and weather, simulated vehicles and events.
- Rule: the platform never shows an alert it has not received. Stored alerts are shown as stored.

INTERFACE: CONTROL CENTER

Redline control center (web/), desktop view at 1440 px
